SUMMARY

Motivated and detail-oriented Software Engineering student with a strong foundation in programming languages such as Python, Java, and MySQL. Experienced in software development, web development, and database management. Proficient in utilizing tools and frameworks like Flutter and Selenium for creating user-friendly applications and automated testing. Eager to apply analytical and problem-solving skills in real-world projects and contribute to innovative technology solutions.

CAREER OBJECTIVE

Seeking a role as a **Software Developer Internship / AI Engineer Internship** where I can apply my background in software development, web technologies, and IT applications to deliver engaging and practical lessons. Available for internship placement from **10 September 2026 until 17 January 2027**. With strong communication skills and experience in developing real-world projects, I am passionate about guiding students to build technical knowledge, problem-solving abilities, and confidence in programming. Open to online or offline teaching.
Expected salary: **RM 1000 - 1500/monthly** (negotiable based on scope and responsibilities).

EDUCATION

New Era University College
Diploma in Computer Science (DCS)
• Final CGPA: **3.89/4.00**

Kajang, Selangor
February 2023 – February 2025

Bachelor of Software Engineering (BSE)
• Current CGPA: **3.93/4.00**

February 2025 – February 2027

WORK EXPERIENCE

Thye Hin Computer Sdn. Bhd

Seremban, Negeri Sembilan

Website Technical Assistant

February 2024-May 2024

- Combination and update of products data
- Photos and videos editing
- Website and Ecommerce platforms maintenance
- Checking of PCs, laptops, printers and monitors problems
- Startup PCs, laptops, printers and monitors problems
- Developed a Return Merchandise Authorization (RMA) System
- Syncing and backup daily product's quantity data

PROJECTS

Accident Detection and Reporting System (YOLOv8, TensorFlow, Computer Vision) (2026)

- Developed a two-stage AI-powered traffic accident monitoring and reporting system using deep learning technologies
- Implemented an accident detection pipeline to identify potential road accidents from real-time video streams
- Designed a secondary accident classification pipeline that analyzes captured accident screenshots to reduce false positives and improve detection reliability
- Integrated automated screenshot extraction and data flow between detection and classification modules for verification processing
- Performed dataset annotation, preprocessing, model training, and evaluation to optimize system accuracy and

performance

- Focused on intelligent monitoring, false tolerance reduction, and scalable real-time traffic safety applications

AI Face Condition Checking System (Flutter, YOLOv8, Computer Vision) (2026)

- Developed an AI-powered mobile application using Flutter and Django for automated facial skin condition analysis.
- Trained and integrated custom YOLOv8 models to detect acne and pigmentation from facial images.
- Implemented a multi-stage AI inference pipeline combining object detection, skin type classification, skin health scoring, and severity assessment.
- Developed RESTful JSON API endpoints for image upload, AI inference, scan history retrieval, and personalized skincare recommendations.
- Built a MySQL database to store scan history, detection results, recommended products, and user records.
- Designed a rule-based recommendation engine that suggests skincare products based on detected conditions and severity levels.
- Utilized OpenCV to generate annotated prediction images with bounding boxes and confidence scores

Property Listing Management System (Django, MySQL) (2025)

- Developed a real estate listing platform for managing and displaying property data
- Built an admin dashboard for creating, updating, and organizing property listings
- Implemented structured backend system to handle property records and categorization
- Improved listing management workflow for real estate operations through centralized system design
- Focused on scalability and usability for handling large volumes of property data

Jewelers Product Display Website (Django, MySQL) (2025)

- Designed and developed a product showcase website using Django Framework with MySQL as the backend database.
- Built an admin dashboard that allows administrators to perform full CRUD operations (Create, Read, Update, Delete) on product information.
- Implemented user authentication and account management, enabling customers to register, log in, and manage their profiles.
- Added a wish list feature for users to save and track their favorite products.
- Integrated structured product categorization and filtering to improve user experience and navigation.

AI News Authenticity Classifier (Hugging Face, DistilBERT) (2025)

- Developed an AI classifier using Hugging Face transformers with distilbert-base-uncased to detect whether news is fake or real.
- Preprocessed and tokenized text data, then fine-tuned the model on labeled datasets for improved accuracy.
- Evaluated performance with precision, recall, F1-score, and ROC-AUC, ensuring robust classification results.

Return Merchandise Authorization (RMA) System (2024)

- Developed with Python programming language
- Streamline warranty and product return management through an intuitive, user-friendly interface.
- Facilitate efficient oversight of suppliers and clients involved in warranty-covered product returns.
- Enable administrators to manage and authorize agents responsible for using the RMA (Return Merchandise Authorization) system.

AWARDS AND SCHOLARSHIPS

- **AIOTIE 2026 Competition (2026)**
 - Developing an AI-powered Accident Detection and Reporting System as part of the competition.
 - Project utilizes YOLOv8, Django, Flutter, and computer vision technologies.
- **New Era Capture The Flag (CTF) Cyber Security Competition Achievement (2023)**

TRAINING AND CERTIFICATE

- **Python Full Stack Certificate of Completion by Six Star Education (2022)**

SKILLS

- **Technical:**
 - Advanced knowledge of **Python, Django, MySQL, and Flutter**, enabling cross-platform and

efficient application development.

- Competent in using **Selenium** for creating robust automated test scripts and web scraping.
 - Proven experience in end-to-end **program development**, including design, implementation, and testing.
 - Strong foundation in both **software and website development**, focusing on performance optimization and user experience.
 - Ability to integrate **APIs** and third-party tools seamlessly into applications.
 - Skilled in **debugging and troubleshooting** complex issues across multiple programming languages and frameworks.
 - Experienced in collaborative development with version control tools such as **Git**.
-
- **Language:** Native in Mandarin, with intermediate proficiency in English and Malay.
 - **Others:** Video Editing, Photography, Coding
